Control Energy Costs Ltd, Kingsgate, 62 High Street, Redhill RH1 1SH

↑ **Boost your business and support employees**

With many car manufacturers now pledging hybrid or fully electric vehicles by 2025, having an EV solution is becoming a must action item for many businesses. A growing demand for electric cars means that businesses and workplaces will be the fuel stops of the future.

This is excellent news in the fight against climate change, but identifying, scoping and installing the right EV solution needs specialist focus.

✂ **CEC Solutions – the connections specialist**

In conjunction with our service partner, we provide an end-to-end project management service. Whether on a small or grand scale, new or retrofit, any concerns associated with an EV charging project can be left to us.

We can advise on how to maximise the use of government incentive schemes to help make your project commercially attractive and guide you with capex for smaller projects, through to part-investment solutions for larger ones.

🌐 **A big picture perspective**

We know that the EV solution you install must be a future-proof investment. With the number of technologies available, you need to make an informed decision on which best suits your needs.

Taking the big picture perspective means analysing usage at a site to ensure no unforeseen conflicts, looking at load shifting, support for on-site generation and sharing of capacity.

As connection specialists, we have years of experience in arranging new connections to a site. Using our network of strategic relationships, our project management team can manage and deliver your requirements on time.

From complete design to installation and maintenance, we can help. If you want to know more please get in touch.
